CHEM-C 117 PRINC OF CHEM & BIOCHEM I (3 CR)

This is an invitation only, small (50 students maximum) section of C117 that is intended for students who plan to continue to organic chemistry or other later courses in chemistry and would benefit from a smaller, more structured section. The course will use a specifications-based grading scheme in which students will get credit for showing mastery of core and advanced topics, and the final grade will be determined by the number of topics students master. Students will be asked to commit to being a part of a supportive and respectful learning community, to attending at least one office hour per week at any point that they are struggling, and to submitting work that accurately reflects their understanding of the material.

EVOLUTION AND ANALYSIS OF BRAIN-BODY-ENVIRONMENT SYSTEMS
Notions of embodiment, situatedness and dynamics are becoming increasingly important in cognitive science, converging on a view in which an agent's behavior and cognition are seen not merely as products of its brain alone, but rather as arising from the interaction between the agent's nervous system, body and environment. In order to evaluate the significance of these ideas, this course will examine the construction and analysis of models of complete brain-body-environment systems, with a particular emphasis on the use of tools from complex systems (including evolutionary algorithms, dynamical systems theory and information theory) to study how such coupled systems work. Behaviors to be examined range from basic motor behavior and sensorimotor learning to categorical perception, selective attention, agency detection and communication. We will also examine some of the broader implications of the brain-body-environment perspective for thinking about brain and behavior.
