**CHEM-C 117: PRINC OF CHEM & BIOCHEM I (3 CR)**

This is an invitation only, small (50 students maximum) section of C117 that is intended for students who plan to continue to organic chemistry or other later courses in chemistry and would benefit from a smaller, more structured section. The course will use a specifications-based grading scheme in which students will get credit for showing mastery of core and advanced topics, and the final grade will be determined by the number of topics students master. Students will be asked to commit to being a part of a supportive and respectful learning community, to attending at least one office hour per week at any point that they are struggling, and to submitting work that accurately reflects their understanding of the material.

EVOLUTION AND ANALYSIS OF BRAIN-BODY-ENVIRONMENT SYSTEMS
Notions of embodiment, situatedness and dynamics are becoming increasingly important in cognitive science, converging on a view in which an agent's behavior and cognition are seen not merely as products of its brain alone, but rather as arising from the interaction between the agent's nervous system, body and environment. In order to evaluate the significance of these ideas, this course will examine the construction and analysis of models of complete brain-body-environment systems, with a particular emphasis on the use of tools from complex systems (including evolutionary algorithms, dynamical systems theory and information theory) to study how such coupled systems work. Behaviors to be examined range from basic motor behavior and sensorimotor learning to categorical perception, selective attention, agency detection and communication. We will also examine some of the broader implications of the brain-body-environment perspective for thinking about brain and behavior.

**MATH-M 118 FINITE MATHEMATICS (3 CR)**

This is an experimental "flipped" version of Finite: before each recitation, students will be responsible for working through online tutorials on their own, and class time will be devoted to working problems. Attendance will be mandatory and part of the grade, with activities in every class. Except for the final exam, the exams will be show-your-work with partial credit (not multiple choice!).

++No alternative Final Exam options will be considered
++Consult Final Examination Schedule to avoid conflicts

In this course, students will begin to explore the personal, institutional, political, and cultural forces that impact the lived experience of being a professional teacher.
Possible key questions for reflection include: How does self-knowledge help teachers positively shape their professional lives? How does school culture shape the day-to-day life of teachers and how do you identify a school culture that is right for you? How does the current emphasis on standardized testing impact the life of a teacher and how can teachers positively respond to this? What does it mean to be a "role model" and what are the challenges and opportunities presented by this social role? What does community mean and how are teachers participants in and facilitators of positive community?
Exploration of these questions will occur through student centered, hands-on, and interactive classroom activities.

Mapping Your Future: How to Make the Most Out of Your College Experience is an eight-week, two credit, graded seminar course designed for students to investigate the purposes of an undergraduate education at IU Bloomington and to expose them to the array of skills, tools, and opportunities that academic advisors, career coaches, and the university have to offer. The assignments and activities in the course include a mixture of readings, class discussions, journaling, out-of-class-activities, and a culminating semester project. By the end of the course, students should have a better understanding of themselves, their academic and career interests, and a plan to maximize their opportunities as an IU Bloomington student.

**TOPIC**: Tackling Test Anxiety

Are you dreading an upcoming test? Do you blank out or have trouble focusing every time you take a big exam? Are you frustrated because you consistently find that your scores don't match what you feel you really know? Preparing for an important professional school entrance exam, the MCAT, LSAT, etc.?
This course is all about evidence-backed strategies for taking your anxiety level way down for any kind of test whether that be for professional school entrance exams or finals in your most difficult courses. Our approach centers on how to 1) apply the science of powerful learning to better prepare for important tests; 2) create effective schedules and habits for studying so it sticks; and 3) transform the emotions that come up before, during, and after the test to achieve your performance and professional goals.

Modern social, political and environmental problems must confront several difficulties in arriving at acceptable, robust and resilient solutions. These difficulties include uncertainty, how time affects important decisions and outcomes, complexity (the real world has lots of variables), and potentially reactive behaviors leading to unintended consequences. Using optimization methods and simulation, this course cover topics from problem formulation to solution.
